

# Revature Employee Vessel (REV)

Jacques Myette & Juan Carlos Trejo

## 1) REV Overview

The purpose of REV is to provide a form of communication between revature employees at all stages of employment. Currently, revature employees do not have an effective way to connect with other employees they have not met in training or on the job after placement. The decision has been made to develop a social network which can allow employees to see what others are working on, to connect to another current employee or a revature graduate through messaging, to showcase projects they are working on, and create a seamless relocation process. Each user would be added to a localized group based on stage, client company and location. Each of these groups would have their own bulletin board system.

### 1.1) Business Rules

Each user must be a Revature employee. Users have a unique profile page with a picture, location, stage of employment (training, placement, graduate), training batch & focus, client company. Users will be able to access other users' profiles and view the information they choose to share. Users will be able to message other employees privately with questions or post publicly to a bulletin board linked to a slack channel. Depending on the user's input for location and client company, they would be dynamically added to a group with other trainees in that location and/or client company.

## 2) Complete Access Request Form

Each Revature employee must fill out a request form to join the virtual community. This form includes: First name, last name, training batch type (java, spark, pega etc.) current position (trainee, 1st year developer, senior developer, revature graduate), location, and client company name.

### 2.1) Business Rules

Each user can only submit one form. The user must supply the email they use for their Revature portal to ensure users from outside of Revature cannot access REV.

## 3) Access Request Form Approvals

There will be one lead approver for each region of the training batches (Virginia, Florida, Texas). The lead approver is responsible for approving access forms from

revature employees and adding them into the system. A form can also be approved by three current Revature Employee Vessel members in order to be added into the system.

### **3.1) Business Rules**

There will be one lead approval per training facility. Each lead will be responsible for verifying the identity of the applicant and approving or denying the applicant then adding them into the system. To reduce the workload of the lead approver, applicants can also be added into the system after by obtaining three form approvals from co-workers of the same batch/training facility who are already in the system.
